

ROCUS

Route Clearance
Unmanned System

A REEL Group
Company

ENIM
Systèmes Industriels

- ▲ A major partner in the Defence and Security sector, CNIM Systèmes Industriels has been supporting armed forces since 1856.
- ▲ CNIM Systèmes Industriels supports engineering units in their missions and offers a range of robust, reliable and operational equipment.

ROCUS, don't stop, move forward. Safely.

Route Clearance Unmanned Systems

IEDs are responsible for numerous human fatalities and the destruction of military assets. With **ROCUS**, CNIM Systèmes Industriels helps land forces in their missions while reducing their exposure to threats.

ROCUS, easily maneuverable, enhances military capabilities and saves lives

Developed on the basis of the THeMIS platform from Milrem Robotics, our UGV is able to operate in difficult terrain, combining endurance, carrying capacity and robustness. ROCUS inspects, confirms and is capable of acting on the threat. It ensures passage of convoys and missions can therefore be safely completed.

Performances

- ▲ 20 km/h | 10 h endurance
- ▲ 4m robotic arm with 100 kg lift capability
- ▲ Ability to operate day and night
- ▲ Unified command system

KEY ADVANTAGES

- Unmanned** > protect the soldiers
- Remotely operated** > can be operated under the protection of a vehicle
- Tracked vehicle** > highly mobile with low ground pressure
- Hybrid design** > reduced logistic footprint
- Towable** > easy to transport
